Why is Cathodic Protection Important?

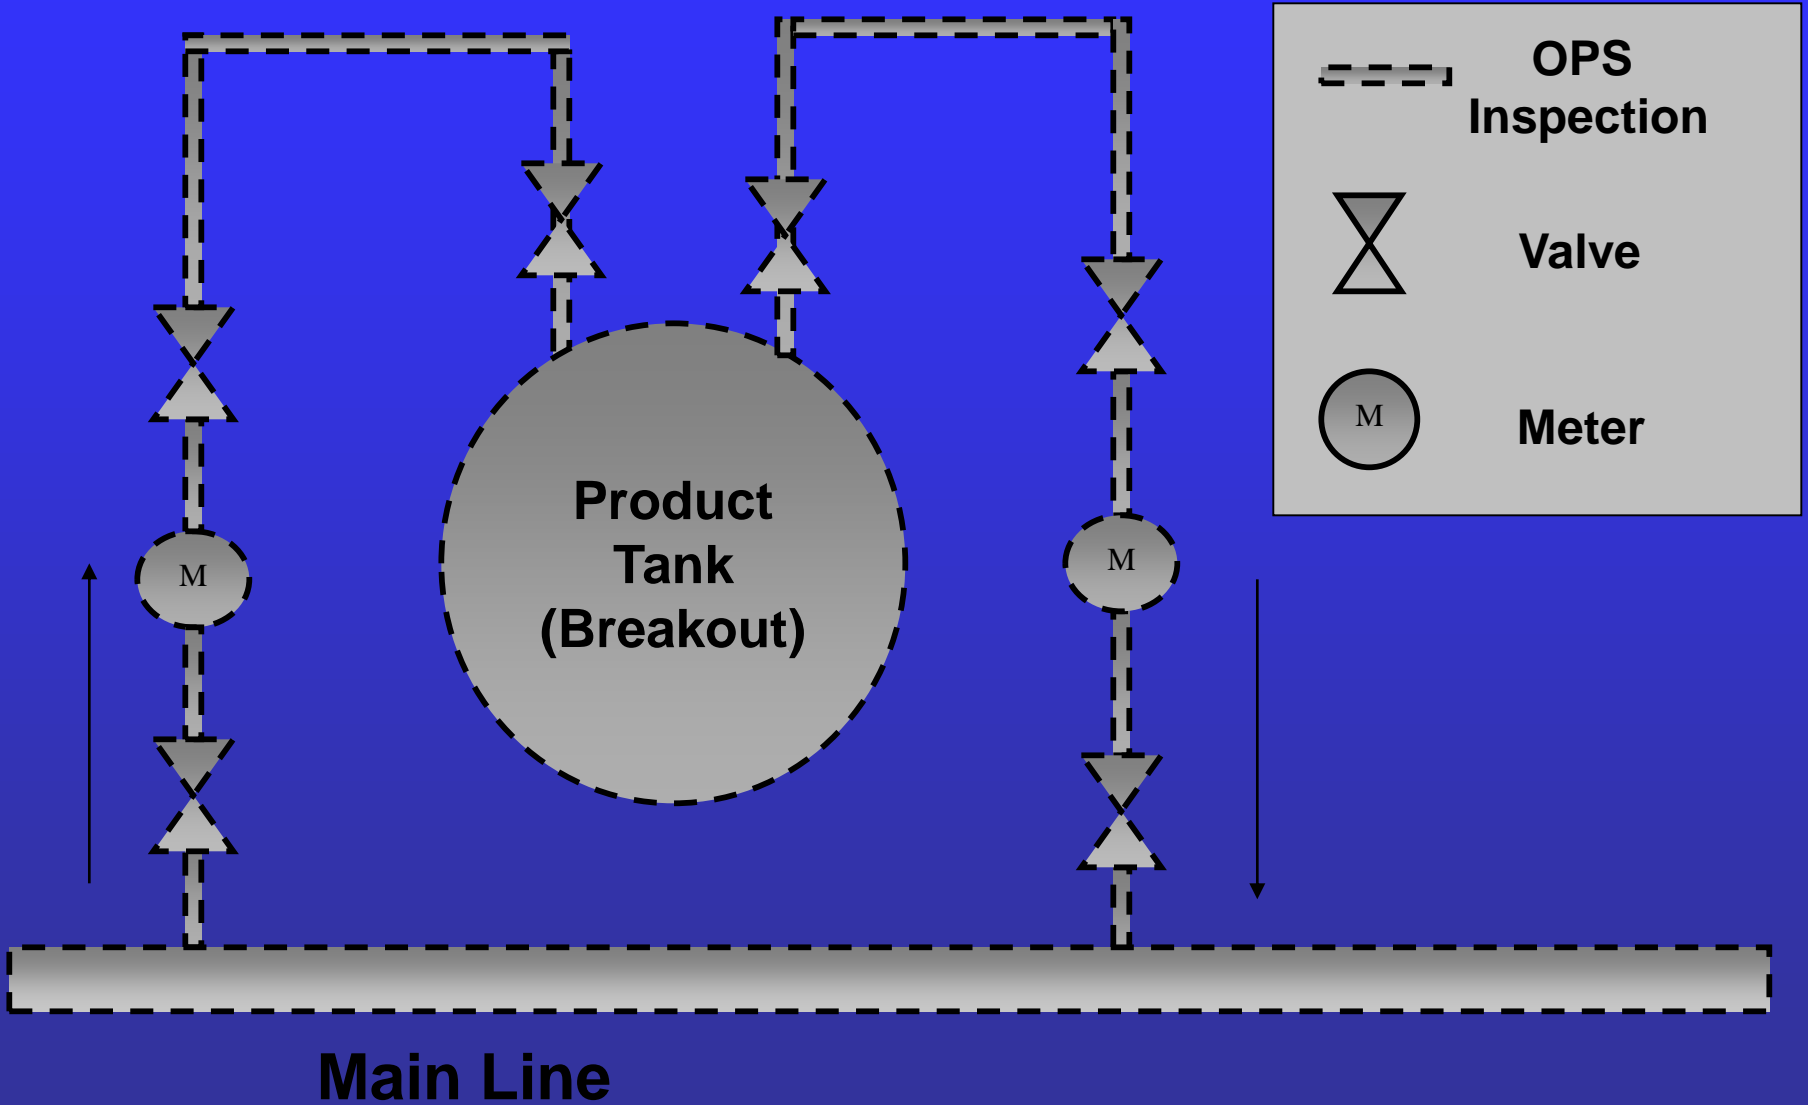

- **Preserve Assets**
- **Avoid Disruption of Service**
- **Enhance Safety**
- **Prevent Leaks**
- **Governmental Regulations**
- **Reduce Maintenance Costs**

Terminal Tankage

Breakout Tank

Charleston, WV Spill

The investigation found that two small holes ranging in size from about 0.4-inch to 0.75-inch in the bottom of the 48,000-gallon tank 396 were caused by corrosion, likely resulting from water leaking through holes in the roof and settling on the tank floor. Furthermore, the CSB inspection found a similar hole penetrating the bottom of nearby tank 397, containing the same chemical at the facility, located in Charleston. Other tanks also showed multiple signs of pitting and metallurgical damage, investigators said. The growing corrosion in these tanks went unnoticed until the bottom of 396 was breached and up to an estimated 10,000 gallons of product made their way through the underlying mixture of soil and gravel under the facility and into the Elk River on January 9, 2014.

What we will cover....

- **Causes of Corrosion**
- **Cathodic Protection Applications**
- **Installation & Maintenance**
- **Rectifier Monitoring**

Early Oil Tanks & Piping did not Employ CP

IRON OXIDE

REFINING

MILLING

IRON OXIDE

THE PROBLEM.....

External Corrosion of Tank Bottom

MFL Floor Inspection

Corrosion Cell Caused by Foreign Material in Sand Cushion

Corrosion Caused by Poor Water Drainage

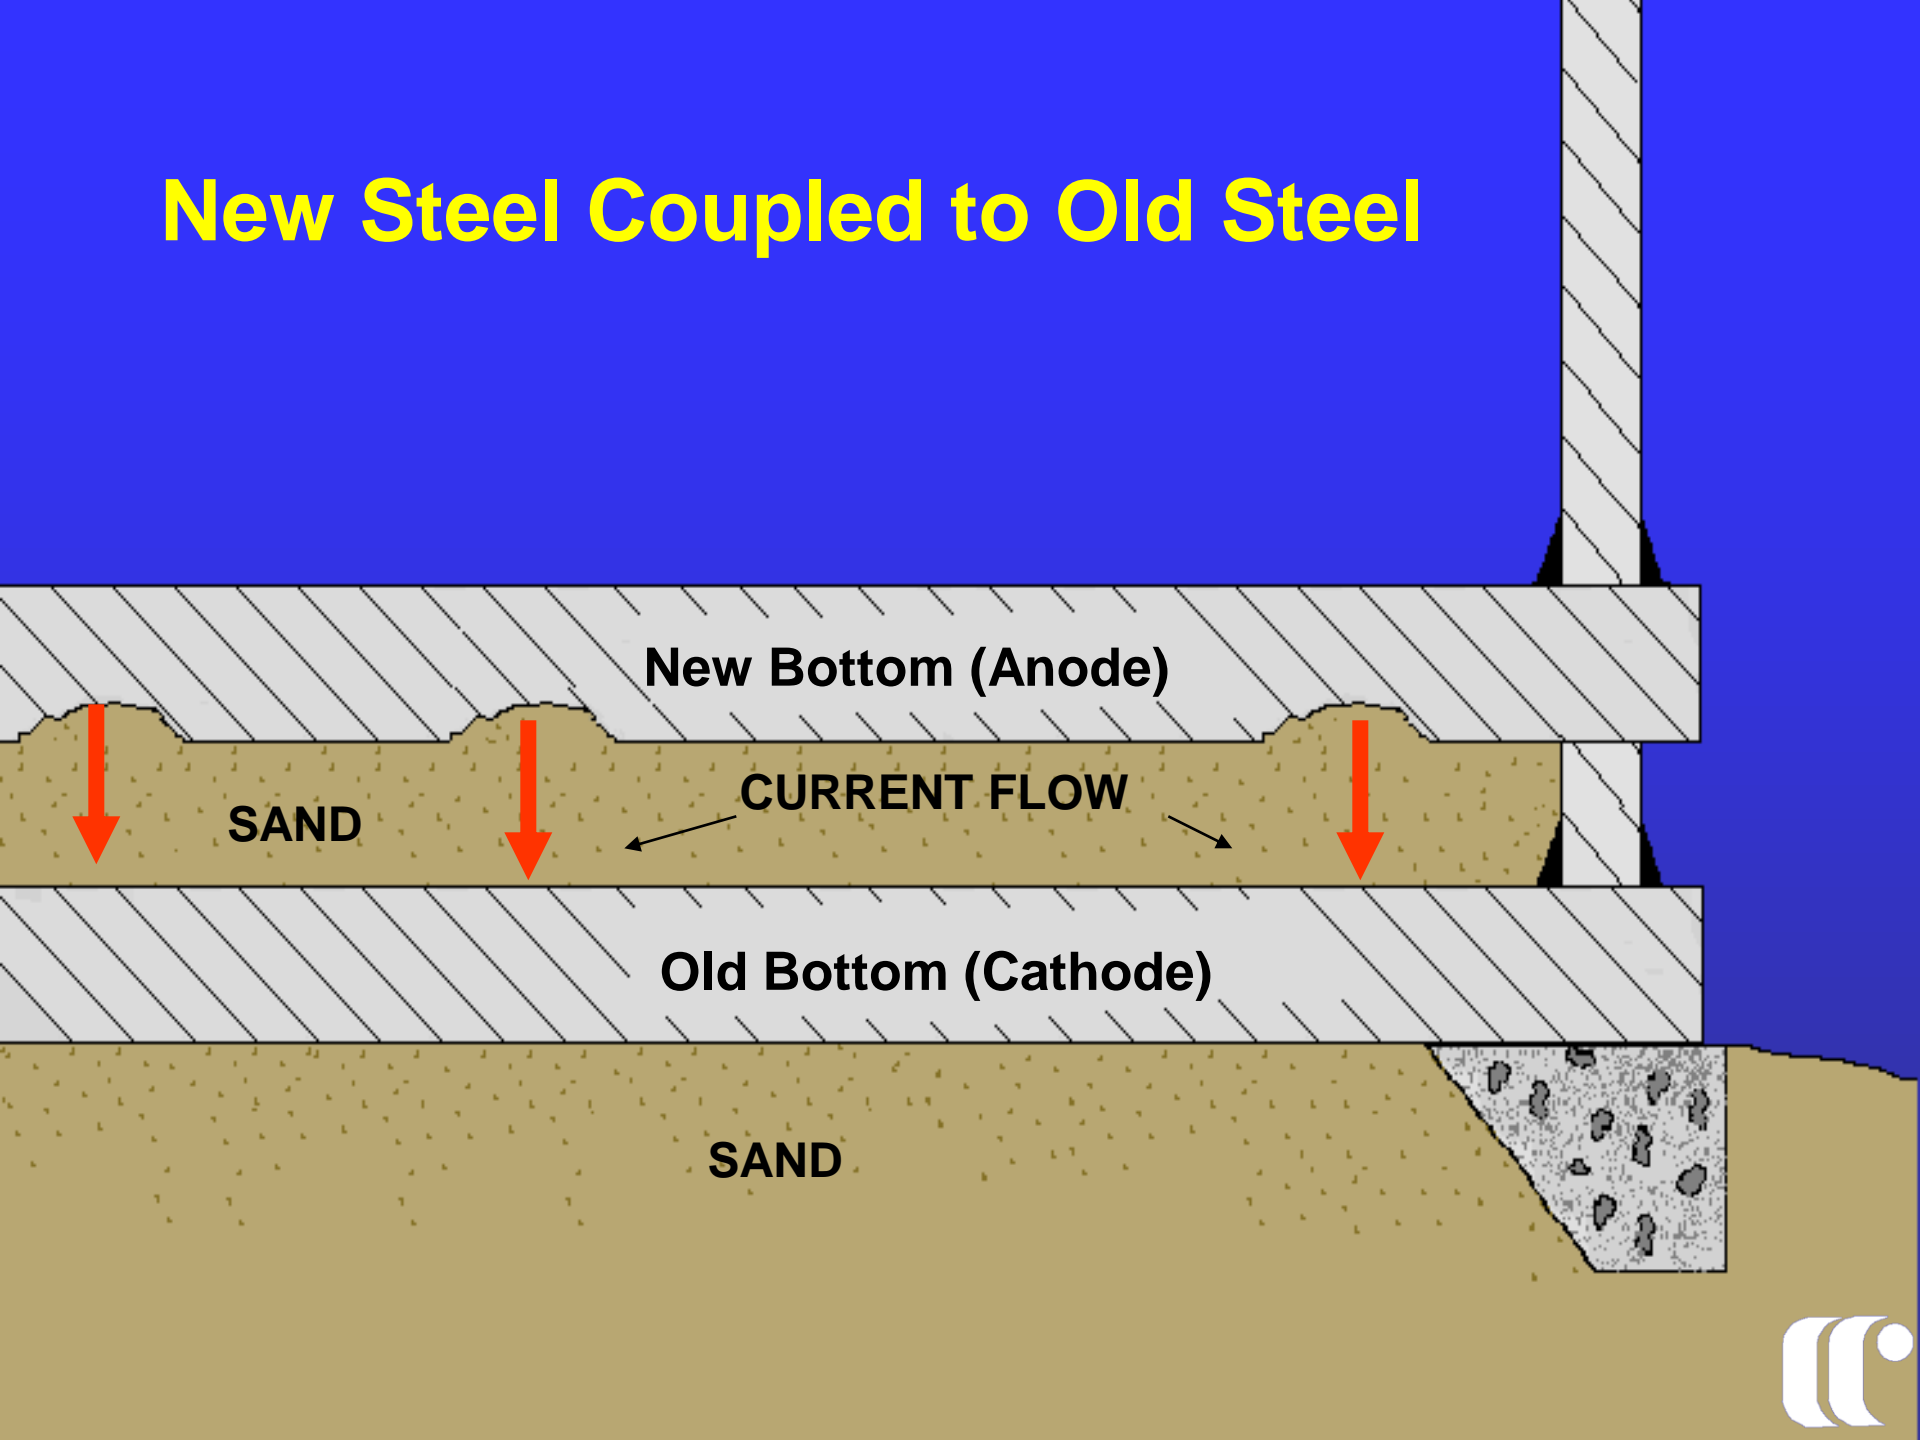

WATER

MOIST SAND

DRY SAND

New Steel Coupled to Old Steel

Concrete Slab

Leak detection groove
under under bottom

Tank bottom required
30% floor
replacement
after 5 years in
service

Types of Cathodic Protection

Galvanic: *Current obtained from a metal with a higher energy level.*

Impressed Current: *Requires external power source (transformer rectifier).*

System Characteristics

Galvanic

- ▶ No external power
- ▶ Fixed driving voltage
- ▶ Limited current
- ▶ Small current requirements
- ▶ Used in lower resistivity environment
- ▶ Usually negligible interference

Impressed

- ▶ External power required
- ▶ Voltage can be varied
- ▶ Current can be varied
- ▶ High current requirements
- ▶ Used in almost any resistivity environment
- ▶ Must consider interference with other structures

Galvanic Anodes

- With the advent of secondary containment liners for AST's, some oil companies initially installed galvanic (zinc or magnesium) anode cathodic protection systems. Many of these same companies have now abandoned this approach due to the inability to obtain effective levels of cathodic protection or limited system design life.
- The industry preference for cathodic protection for large AST's is now impressed current.

**Galvanic
Anode**

Galvanic Anode Installation on AST. Note that anode life and current output are dependent upon sand / backfill conditions. Reference cells were rarely installed to monitor performance.

(Many galvanic systems installed by tank contractor)

Recommended Practices

API-651 - Cathodic Protection of Aboveground Petroleum Storage Tanks:

“Galvanic anodes method is not practical for protection of large bare structures.”

NACE RP0193-2001 - External Cathodic Protection of On-Grade Carbon Steel Storage Tank Bottoms:

“Galvanic protection systems can be applied to tank bottoms where the metallic surface area exposed to the electrolyte can be minimized through the application of a dielectric coating or the area is small due to the tank size or configuration.”

Impressed Current Cathodic Protection

Impressed Current Cathodic Protection System

- ▶ Anodes
- ▶ Rectifier
- ▶ Wiring

Monitoring
Conduit

Tank

Cathodic Protection Monitoring

- Read rectifiers every 30 days.
- Conduct annual inspection (obtain potentials) by NACE certified individuals.

corrosion attack on ductile iron
pipe.

A photograph of an industrial facility, likely a refinery or chemical plant. In the foreground, a dense network of large, grey, insulated pipes runs across a dirt and gravel area. The pipes are wrapped in a silver, reflective insulation material. In the background, several large, cylindrical storage tanks are visible, some with ladders and walkways. The sky is clear and blue. The word "Questions?" is overlaid in large, bold, yellow text in the center of the image.

Questions?

JUN 2 2005

Thank You
